

Server Security Permissions for TalkiT

When installing TalkiT to a network drive all users need to have full control over the files installed for the application to function. Failure to do this will result in 1 or more DLLs or OCXs not loading with an error message like “Component 'TDBG5.OCX' not correctly registered: file is missing or invalid 339”.

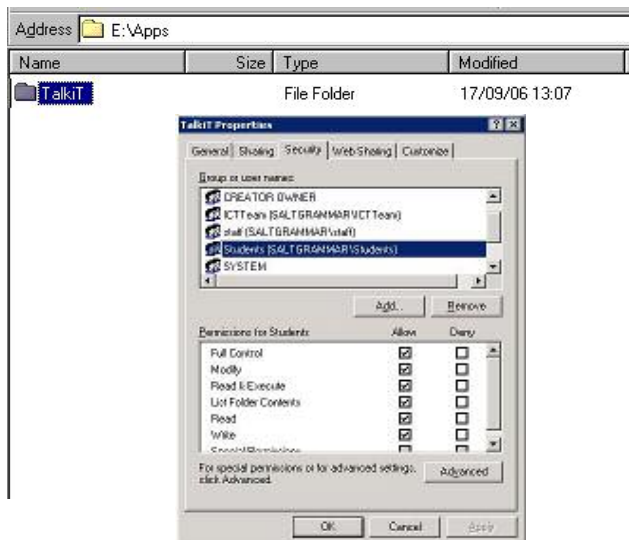

In the case below TalkiT has been installed to a shared *Apps* drive on a server.

Name	Size	Type	Modified
Apps		File Folder	17/09/06 13:06
MathsWeb		File Folder	17/09/06 13:11

The permissions on the *Apps* folder for students (and staff) are shown here:

Further security permissions need to be set on the *TalkiT* folder as shown here:

Many thanks to Bob Mothers, at Salt Grammar, for all his help with this problem.
